Helping your child build essential skills is easy!

These teacher-approved activities have been specially developed to make learning both accessible and enjoyable. On each page, you'll find:

Focus Skill

The focus of each activity page is clearly indicated.

Meaningful learning

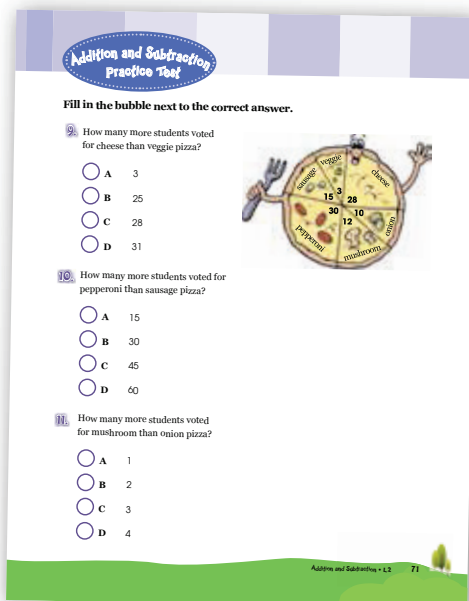

Each activity has been carefully designed to make your child's learning meaningful and fun.

Instructions

The read-aloud instructions are easy for your child to understand.

This book also contains:

Instant assessment to ensure your child really masters the skills.

Completion certificate to celebrate your child's leap in learning.

Motivational stickers to mark the milestones of your child's learning path.

Addition and Subtraction

Understanding basic addition and subtraction facts are important real-life skills. We probably add or subtract something every day. When you buy things, you need to figure out how much money you need to pay and how much money you will get back. The activities that follow will give your child lots of practice in these important skills with one, two and three digits.

What to do

These activity pages provide many opportunities for your child to practice addition and subtraction with and without regrouping. When you regroup in addition, you carry over from the right-hand column to the left-hand column. For example:

$$\begin{array}{r} 19 \\ + 5 \\ \hline 24 \end{array}$$

In subtraction problems that require that your child regroup numbers, he or she will borrow from the number to the left.

For example:

$$\begin{array}{r} 25 \\ - 9 \\ \hline 16 \end{array}$$

Check your child's work when he or she finishes each activity page.

Keep On Going!

Have your child add everything in sight: vegetables, cars and so on. You can also play subtracting games with your child, such as: If you have 99 balloons and you lose 50, how many will you have left? (49). Encourage your child to become an "addition and subtraction champion."
